

Managing Laboratory Operations and Processes Online

Program Name: Managing Laboratory Operations and Processes Online

2 Weeks

eLearning

Credits: 10 CPD | 10 CEU | 7 Contact Hours

Understand the lab ecosystem and how the laboratory helps the organization to achieve its long-term goals.

Managing Laboratory Operations and Processes will assist you in becoming an effective laboratory manager by providing you with a critical understanding of laboratory operations and processes, contextualising these within a laboratory's business strategy, to realise performance objectives. [Included in the Lab Management Online course]

TOPICS:

- ✓ Strategy Development
- ✓ Planning and Control
- ✓ Operational Improvement
- ✓ Objective Setting
- ✓ Organisation of Work

OUTCOMES:

Learners will discover and gain insights about:

- ✓ The context in which the laboratory operates (the role of the laboratory in achieving the organization's strategic goals).
- ✓ The formulation of the lab strategy (establish what the competitive advantage of the laboratory in which the person works, is.).
- ✓ The operational management process in the laboratory.
- ✓ The potential inefficiencies in the process, the impact on productivity and how to plan to address the inefficiencies identified in the process flow.
- ✓ The value of delegation in managing and monitoring the plan to address the gap identified in the process flow.
